

AYUSH MISHRA

New Delhi 110059 | +91 8826336732 | knandan400@gmail.com | Github: Ayushm19

SKILLS & INTERESTS

Frontend: JavaScript, React, Redux, TypeScript, NextJS
Backend: Node.js, Express, TypeScript, GenAI, Python, FastAPI
Database: SQL, MongoDB
Core CS: Data Structures & Algorithms
Devops: Docker, Jenkins, AWS, GCP
AI/LLM: RAG, Vector Databases, Embeddings, LangChain, MCP, AI Agents

WORK EXPERIENCE

- Software Developer**
Recruiting Monk

Jul 2025 - Aug 2026
Remote

 - Full-Cycle Feature Leadership: Spearheaded **end-to-end development**—from **high-level design (HLD)** to **low-level design (LLD)**—across multiple features, strictly adhering to **SDLC best practices** and leading teams to successful deployments
 - Built **scalable microservices architecture** using **Node.js/Express.js** with **TypeScript**, supporting multiple user roles (Company, Admin, Candidate)
 - Worked on building **agentic AI microservices**, **cutting inference cost** and **improving response time** by benchmarking and selecting the right **LLM model** for each worker service
 - Built a **vector database** and **embedding model** pipeline, preparing a **skill graph** backing other agents, using **LangChain** for prompt orchestration
- Cloud Engineer Intern**
Cloud Edge Technology

Jan 2025 - Jun 2025
Remote

 - Worked on cloud-based application development using **GCP services**, **microservices**, and **serverless architectures**.
 - Implemented **cloud monitoring and logging** to track application performance and detect issues.

PROJECT EXPERIENCE

- Multi-Agent Resume Ranking**
Python, FastAPI, Google Gemini, Multi-Agent LLM Orchestration, uv
 - Architected a **multi-agent candidate-ranking system** with **seven specialist agents** (JD Analyst, Resume Parser, six evaluator agents, Evidence Verifier, Deterministic Scorer, Critic) coordinated by a **supervisor pipeline**
 - Designed a **deterministic scoring layer** so LLM agents only emit bounded, evidence-backed opinions while **weighted scoring arithmetic** in code computes the final rank, ensuring no single agent controls the outcome
 - Built **input/output guardrails** including file-type and size validation, **prompt-injection scanning**, **PII redaction** before any model call, bias screening, and a bounded critic accept/revise/reject repair loop
 - Implemented an **evidence-verification layer** that cross-checks every agent-cited quote against the source resume to eliminate hallucinated justifications
 - Shipped as a **FastAPI service** with **REST endpoints** (/rank, /rank/text, /analyze-jd, /evaluate) and an interactive workbench UI; supports **pluggable LLM providers** with an offline mock mode for testing
- Welth - Finance Team Collab Website**
Next.js Server Actions, MongoDB, Mongoose, Auth.js, Inngest, Resend, Google Gemini
 - Designed the **backend data model** and logic for **team collaboration**—shared accounts, admin-managed monthly spend limits, per-teammate permissions, and transaction attribution—across **MongoDB collections** (User, Account, Transaction, Budget, Team, TeamMember)
 - Implemented **Auth.js OAuth backend** with **encrypted cookie sessions**, server-side storage of Google access/refresh tokens, and **automatic token refresh** on expiry
 - Built a **token-based team invite workflow** (create, accept, decline) with **role-based access control** enforced in server actions
 - Automated **background jobs** with **Inngest** for recurring transactions, monthly report generation, and budget-threshold alert triggers
 - Integrated **Google Gemini (1.5 Flash)** into a server-side pipeline to parse uploaded receipts and auto-extract transaction details (amount, date, category)
 - Built the **email delivery pipeline** with **Resend** and React Email templates for monthly summaries and budget alerts

EDUCATION

GNIT, IPU (Overall CGPA: 8.7)
B-TECH Computer Science

Noida
Graduation Date: Jun 2025
